**RESPONSE TO NOTICE OF NON-COMPLIANT APPEAL BRIEF**

MS Appeal Brief - Patents  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Dear Sir:

In response to the Notice of Non-Compliant Appeal Brief under 37 C.F.R. § 41.37, Applicant respectfully submitted a Supplemental Appeal Brief on May 1, 2006. However, the Fax Transmission inadvertently identified the wrong application number (see copy of PTO Auto Reply Facsimile Transmission dated May 1, 2006 enclosed).

Applicant therefore respectfully submit another copy of the Supplemental Appeal Brief as filed May 1, 2006 with the correct heading (i.e., application number, applicant, filing date, etc.). Please note that no new matter has been added to the Supplemental Appeal Brief.

Applicant believes no fee is due with this response. However, if a fee is due, please charge our Deposit Account No. 22-0185, under Order No. 20136-00328-US from which the undersigned is authorized to draw.

Dated: May 2, 2006

Respectfully submitted,

By Myron Keith Wyche

**SUPPLEMENTAL APPEAL BRIEF**MS Appeal Brief - Patents  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Dear Sir:

The undersigned hereby submits a Supplemental Brief on Appeal under 37 C.F.R. § 1.192. An Appeal Brief was filed in connection with the above-identified patent application on January 20, 2004. In response thereto, the Examiner re-opened prosecution. On November 23, 2004, the Examiner issued a Final Rejection. It is requested that the Appeal be reinstated, and that this Supplemental Appeal Brief be included in the record.

The fees required under § 41.20(b)(2), and any required petition for extension of time for filing this brief and fees therefor, are dealt with in the accompanying TRANSMITTAL OF APPEAL BRIEF.

303212

Application No.: 10/005,862

2 Attorney Docket No.: 20136-00328-US

This brief contains items under the following headings as required by 37 C.F.R. § 41.37 and M.P.E.P. § 1206:

I.	Real Party In Interest
II	Related Appeals and Interferences
III.	Status of Claims
IV.	Status of Amendments
V.	Summary of the Claimed Subject Matter
VI.	Grounds of Rejection to be Reviewed on Appeal
VII.	Argument
VIII.	Claims Appendix

#### I. REAL PARTY IN INTEREST

The real party in interest in this application remains the International Business Machines Corporation.

#### II. RELATED APPEALS AND INTERFERENCES

There are no other appeals, interferences, or judicial proceedings which will directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal.

#### III. STATUS OF CLAIMS

Claims 1-16 are pending in the application. Claims 1-16 are pending on appeal. No claims have been allowed.

#### IV. STATUS OF AMENDMENTS

There are no unentered amendments filed in this application.

Application No.: 10/005,862

3 Attorney Docket No.: 20136-00328-US

## V. SUMMARY OF THE CLAIMED SUBJECT MATTER

The present invention relates to the management of individual hardware and software components on a real-time basis in an information technology (IT) system. The IT system is shown in FIG. 3 (page 11, lines 10+ of the specification). For the example given of FIG. 3, the IT system includes a mainframe computer 11 interconnected with a DASD 12, printer 15, servers 16-17, routers 18-19, data terminals 21 and data transfer device 22. Associated with each of the components is an agent 24 (see specification page 11, lines 15-26). The agent identifies each transaction in each service in which a respective component participates. In accordance with the invention, the business value of each service is allocated to the component for each business function requesting a service as shown in FIG. 2.

The values shown in FIG. 2 are based on the revenue and cost associated with each service. The business value may be determined precisely based on the monetary value of each transaction, total dollar value of the transaction, or it could be generalized based on transaction types, i.e., an approximated value for a class of services such as email or on-time billing.

The table of FIG. 2 will identify components used in the various services. In this way, the value of the component to the system can be determined based on the value of the service performed. The component value to the system is shown in FIG. 2 as the sum of its value for each of the services. The table of FIG. 4 will help demonstrate the total value of the service to the business entity. Based on the type of transaction, and participation of individual components in the transaction, it is possible to plan system upgrades to components by taking into account their relative value to the system.

## VI. GROUNDS OF REJECTION TO BE REVIEWED ON APPEAL

As to the rejection under 35 U.S.C. § 101, claims 1-9 stand and fall together and claims 10-11 stand and fall together and claims 12-16 stand and fall together. As to the rejection under 35 U.S.C. § 112, claim 1 stands by itself.

Application No.: 10/005,862

4 Attorney Docket No.: 20136-00328-US

As to the rejection under claims 1-16 under 35 U.S.C. § 102, claims 1 and 5-9 stand and fall together. Claims 2, 3, 4 and 16 stand alone. Claims 10, 11 and 12 stand and fall together. Claims 13 and 14 stand and fall together.

## VII. ARGUMENT

### The Rejection under 35 U.S.C. § 101

The rejection under 35 U.S.C. § 101 as set forth on page 7 of the Final Rejection is stated as follows:

Claims 1-16 are rejected under 35 U.S.C. § 101 because the claimed invention is directed to non-statutory subject matter. The basis of this rejection is set forth in a two-prong test of: (1) whether the invention is within the technological arts; and (2) whether the invention produces a useful, concrete, and tangible result. For a claimed invention to be statutory, the claimed invention must be within the technological arts. Mere ideas in the abstract that do not apply, involve, use, or advance the technological arts fail to promote the "progress of science and the useful arts" (i.e., the physical sciences as opposed to social sciences, for example) and therefore are found to be non-statutory subject matter. For a process claim to pass muster, the recited process must somehow apply, involve, use, or advance the technological arts.

The basis of this rejection is set forth as the two-prong test of: (1) whether the invention is within the technological arts; and (2) whether the invention produces a useful concrete and tangible result.

The rejected claims are within the technological arts. Claim 1 describes a computerized process to manage an information technology system having a plurality of components that provide a plurality of services. Claim 10 is directed to a system for managing an IT infrastructure which has a plurality of components. Claim 12, likewise, is directed to a system for managing an IT infrastructure.

Application No.: 10/005,862

5 Attorney Docket No.: 20136-00328-US

As for claims 1-10, numerous steps relating to a statutory process are recited. This includes the steps of (1) collecting at each of the components usage data indicating an amount of use each component receives, (2) reporting the usage data, constructing an evaluation function for evaluating each service and correlating each service with each component used to provide the service, and then determining from the correlated services and components the value of each component and the value of component to the IT system (claim 1).

Under the Commissioners Guidelines for Examining Computer Related Inventions, MPEP 2106, subject matter which is not part of the four statutory categories of invention, set forth in 35 U.S.C. § 101, i.e., processes, machines, manufactures and compositions of matter, is limited to abstract ideas, laws of nature and natural phenomena. These three exclusions of non-statutory subject matter do not consist of a practical application or use of an idea, law of nature or nature phenomena and are not, therefore, patentable. In practical terms, claims do not define a statutory processes if they consist solely of mathematical operations without some claimed practical application (i.e., executing a mathematical algorithm) or simply manipulate abstract ideas without some claimed practical application. The recited steps of collecting usage data for providing a service at a component, then reporting the usage data is more than the manipulation of abstract ideas.

The foregoing rejected claims clearly recite a practical application, in that they are directed to collecting and manipulating data for the purposes of managing an IT system. System claims 10-16 are directed to apparatus for managing an IT infrastructure system. Claim 1 recites the practical application of managing the integrated information technology system by determining the value of each component based on the services performed, and the value of each of the components to the system. Thus, the process does not provide mere ideas in the abstract that do not apply, involve, use or advance the technology arts.

Application No.: 10/005,862

6 Attorney Docket No.: 20136-00328-US

The evaluation of a component is the kind of useful, concrete and tangible result which meets the requirements of 35 U.S.C. § 101. The claimed invention as a whole accomplishes the practical application of managing an IT system, by evaluating components used therein, and produces useful, concrete and tangible results as required in *State Street Bank and Trust Co. v. Signature Financial Group, Inc.* 149 3rd. 1368 1374, 47 USPQ 2d. 1596, 1601-1602 (Fed. Cir. 1998).

The rejected claims also fall within the pre-computer process activity, "safe harbor" of the guidelines. The present claims all require that data be collected reflecting the usage of different components of an IT system.

The Rejection under 35 U.S.C. § 112

Claim 1 is objected to according to the Final Rejection:

As per claim 1, claim 1 is directed towards managing an integrated IT system having a plurality of components. The claim recites the steps of "reporting the usage data of each component for each service" "constructing a valuation function for valuing each service", and "determining from said correlated services and components a value of each component and a value of said IT system".<sup>1</sup> It is unclear based on these limitations what the applicant regards as his invention because these limitations fail to identify what is occurring in the process. First, it is unclear as to who or what the usage data is being reported. Second, it is unclear as to how and/or when a valuation function is being constructed and what valuation function is specifically being used. Third, it is unclear how values for components and a value for an IT system is determined based on correlations. Therefore, based on these limitations, it is unclear as to what is distinctly occurring by the Applicant's invention. Clarification and correction is required.

MPEP 2173.02 describes the requirements for clarity and precision under 35 U.S.C. § 112, second paragraph.

<sup>1</sup> During prosecution, the claim was inadvertently changed from reciting a value to said IT system to a value of said IT system. Applicants will treat the claims as though it was unamended in this respect using the former recitation.  
383212

Application No.: 10/005,862

7

Attorney Docket No.: 20136-00328-US

The essential inquiry pertaining to this requirement is whether the claim sets out and circumscribes a particular subject matter with a reasonable degree of clarity and particularity. Definiteness of claim language must be analyzed, not in a vacuum, but, in light of:

- (a) The content of the particular application disclosure;
- (b) The teachings of the prior art; and
- (c) The claim interpretation that would be given by one in possession the ordinary level skill in the pertinent art at the time the invention was made.

The test for definiteness under 35 U.S.C. § 112, second paragraph is whether "those skilled in the art would understand what is claimed when the claim is read in light of the specification." *Authoconnects, Inc. v. Safety Travel Chairs, Inc.* 806 F2d. 1565, 1576, 1 USPQ 2d. 1081, 1088 (Fed. Cir. 1986). If one skilled in the art is able to ascertain the meaning of the terms in light of the specification, 35 U.S.C. § 112, second paragraph, is satisfied.

As noted during the prosecution of the application, the Examiner is imposing a requirement which is non-statutory. Specifically, the foregoing section of the MPEP and the relevant case law do not require the claims to identify in each limitation what is occurring in the process. The requirement that the claim be read in light of the specification will satisfy any need to understand what is occurring in the process.

#### Rejection of Claims under 35 U.S.C. § 102(a) and (e)

MPEP § 2131 sets forth the requirements for a reference to anticipate a claim.

In order to anticipate a claim, the reference must teach every element of the claim. A claim is anticipated only if each and every element as set forth in the claim is found, either expressly or inherently described, in a single prior art reference *Vetigal Brothers v. Union Oil Co. of California*, 814 F2d. 628631 to USPQ 2d. 1051, 1053 (Fed. Cir. 1987). It is clear that the cited reference does not meet this requirement in several respects.

Application No.: 10/005,862

8 Attorney Docket No.: 20136-00328-US

Per claim 1, the elements of the claim are as follows: (1) collecting in each of the components usage data indicating an amount of use each component receives in providing each of the services, (2) reporting the usage data of each component for each services, (3) constructing an evaluation function for evaluating each service, (4) correlating each service with each component used to provide said service; and (5) determining from said correlated services and components the value of each component and a value to said IT system.

The cited reference does not disclose any structure or process to collect any such usage data as defined above. The reference creates models of the system, and, based on the performance of the models, effects management of the system. The dynamic learning model is derived by determining various thresholds for system performance which are referred to as service level agreements (SLA's). These are numerical values which represent some particular physical threshold of a system component. In the example of the patent, the access time to a server is one such SLA. Values of component performance are determined from a test program or simulation and collected in a data base. The data collected in response to the test data is used to update an IT model of the system. In this way, performance of the system can be modeled.

This structure in no way suggests the ability to determine the value of a component, based on its role in performing a service by the IT system. The present invention, as set forth in exemplary claim 1 above, collects actual usage data for each component at the component level for each service. This usage data can be used to evaluate the specific value of the component to each of the services, as well as to the overall system. In claims 10-16, an agent is provided for carrying out this feature which is not disclosed in the reference.

In reviewing the reference, there is no such structure which can be shown that collects usage data and uses such usage data to evaluate the value of components of the system. The comments contained in the Final Rejection regarding Adriaans et al., particularly item 13 in the Final Rejection, are not supported at the particular locations referenced in the rejection. Specifically, the step of collecting in each of the components usage data indicating an amount of use each component receives for each system is not disclosed in the abstract, nor in col. 5, 6, 9

Application No.: 10/005,862

9 Attorney Docket No.: 20136-00328-US

and 11. The subject reference uses various test programs to simulate actual system transactions, and measures the physical performance of the system components in response to such test programs, not usage data which can be used to determine a value of a component.

The Final Rejection statement that the step of constructing an evaluation function for evaluating each service is disclosed in the abstract, FIG. 4, col. 5, lines 30-50, col. 6, lines 15-35, col. 8, lines 44-60 and col. 9, lines 45-67 is unsupported by the reference. The reference does not make any calculation to evaluate each service, nor does it correlate each service with a component to provide the service.

The remaining claims in the case carry similar limitations not shown or disclosed in the reference. These limitations include claim 2, wherein in the component value is determined from usage statistics accumulated at each component. The step of evaluating the worth of each component (claim 3) based on multiple uses of the component in multiple services performed by the system, a step of constructing a relationship table (claims 4, 13 and 16) identifying the components used in providing each service are not disclosed in the reference.

The resolution of the issue under 35 U.S.C. § 102 is a factual issue, wherein each and every element of the claims must be disclosed in the cited reference. As shown above, the reference fails to anticipate each and every element of any claim.

Application No.: 10/005,862

10 Attorney Docket No.: 20136-00328-US

## VIII. CLAIMS

A copy of the claims involved in the present appeal is attached hereto as Appendix A. As indicated above, the claims in Appendix A do include the amendments filed by Applicant on September 7, 2004.

Dated: 5/11/06

11 Attorney Docket No.: 20136-00328-US

**APPENDIX A-CLAIMS ON APPEAL****Claims Involved in the Appeal of Application Serial No. 10/005,862****Listing of Claims:**

1. (Previously presented) A computerized process for managing an integrated information technology (IT) system having a plurality of components and providing a plurality of services, the process comprising the steps of:  
collecting, at each of the components, usage data indicating an amount of use each component receives in providing each of the services,  
reporting the usage data of each component for each service;  
constructing a valuation function for valuing each service,  
correlating each service with each component used to provide said service; and  
determining from said correlated services and components a value of each component and a value to said IT system.
2. (Previously presented) The process according to claim 1, wherein said component value is determined from usage statistics accumulated at each component.
3. (Original) The process according to claim 2, further comprising the step of evaluating a worth of each component based on multiple uses of said component in multiple services performed by said IT system.
4. (Original) The process according to claim 1, further comprising the step of constructing a relationship table identifying the components used in providing each service, wherein a configuration management process is fed by a change management process in order to maintain the relationship table as changes to said IT system are made.
5. (Original) The process according to claim 1, wherein valuing a given service comprises determining a value for each transaction conducted in providing that service.

383212

Application No.: 10/005,862

12 Attorney Docket No.: 20136-00328-US

6. (Original) The process according to claim 1, further comprising the step of providing for each component an agent for accumulating transaction data regarding services provided using that component.

7. (Original) The process according to claim 6, wherein said value is determined in said determining step in accordance with the transaction data.

8. (Original) The process according to claim 6, wherein said transaction data includes the type of transaction and a value associated therewith.

9. (Original) The process according to claim 6, further comprising the step of reporting the transaction data.

10. (Previously presented) A system for managing an IT infrastructure having a plurality of components for providing a plurality of services, said system comprising:

an agent associated with each of the components, said agent identifying each transaction of a service performed by said IT infrastructure; and

an information collection system for collecting from said agents transaction information relating to each service performed, said system determining from said transaction information which of said components are involved in said transaction.

11. (Original) The system according to claim 10, wherein said information collection system provides a report which identifies for each service the value of said service and the value of the components used in providing said service.

Application No.: 10/005,862

13

Docket No.: 20136-00328-US

12. (Original) A system for managing an IT infrastructure comprising:  
an information technology process model which defines a plurality of groups of processes defining information flow for an integrated management model defining the IT infrastructure for a plurality of IT services; and  
a plurality of agents for monitoring each component of said IT infrastructure, said agents collecting transaction information identifying each transaction by service type;  
said agents reporting over said IT infrastructure transaction information to said information process model whereby said information is used by said model.

13. (Original) The system for managing an IT infrastructure according to claim 12 wherein said information is processed to provide a table which identifies for each component the service in which the component participates.

14. (Previously presented) The system for managing an IT infrastructure according to claim 13 wherein said information from said agents are processed to derive a second table identifying a total value of each service based on said information.

15. (Original) The system for managing an IT infrastructure according to claim 14 wherein said total value is determined for at least some of said services based on the number of transactions performed by said services.

16. (Previously presented) The system for managing an IT infrastructure according to claim 13 wherein said first table includes a valuation of each component based on said component's participation in each of said services.
